Stavros Dallidis

Pythagora 21• Alexandroupolis 68132, Greece • Email: sdallidis@tudelft.nl • website: https://stavrosdallidis.github.io/

EDUCATION

09/2026 - Present **Technical University of Delft**, Delft, The Netherlands

- MSc in Electrical and Computer Engineering (2-year degree; 120 ECTS)
  - Track: Microelectronics

09/2021 - 06/2026 **University of Cyprus (UCY),** Nicosia, Cyprus

- BSc in Electrical and Computer Engineering (4-year degree; 240 ECTS)
  - Top 10%
  - Thesis: "Radiation-Hardened Circuit Design in Amorphous IGZO Thin-Film Transistor Technology for Space Applications"
  - Best Senior Design Project Award — Nominee, 2026

09/2018 - 06/2021 **3rd Lyceum of Alexandroupolis**, Alexandroupolis, Greece (Grade: 19.3/20 "Distinction")

PROFESSIONAL EXPERIENCE

06/2026 – 09/2026 **Researcher,** Distributed and Networked Control Systems (DNCS) Group, Nicosia, Cyprus

- Contributing to research in distributed and networked control systems, focusing on control theory and cooperative systems
- Assisting in the preparation and writing of a technical book on control theory.

06/2025 – 05/2026 **Undergraduate Researcher,** Holistic Electronics Research Laboratory (HERL), Nicosia, Cyprus

- Conducted my bachelor's thesis under the supervision of Prof. Julius Georgiou
- Characterized Pragmatic Semiconductor a-IGZO TF Technology for space radiation environments.
- Designed and evaluated radiation-hardened circuit topologies targeting satellite applications.
- Performed standard cell-layout techniques to ensure maximum reliability.

06/2025 – 08/2025 **SMT Manufacturing Engineer,** Prisma Electronics S.A., Alexandroupolis, Greece

- Prisma Electronics S.A. is a Greek high-tech company specializing in advanced electronics manufacturing, R&D, and IT solutions for defense, space, shipping, and industrial sectors.
- Gained hands on experience programming pick and place machines and operating automated inspection systems.
- Collaborated with various departments to implement electrical systems intended for large enterprises.

07/2024 - 08/2024 **Undergraduate Researcher,** Phaethon Centre of Excellence, Nicosia, Cyprus

- Phaethon is one of the two Excellence centers in University of Cyprus.
- Under the supervision of Prof. George E. Georghiou, I developed a machine learning framework to predict PV system power outputs with high accuracy.
- Developed scripts to detect and handle outliers in large datasets.

05/2024 - 07/2024 **Undergraduate Researcher,** Imperial College London, London, United Kingdom

- Collaborated with Prof. Pantelis Georgiou and Yuting Xu within the Centre for Bio-Inspired Technology.
- Developed a CNN model in C that was able to run in an ESP32 microcontroller.
- The model would later be used for diabetes-focused preventive health checks for patients.

06/2023 - 08/2023 **Technician,** Phaethon Centre of Excellence, Nicosia, Cyprus

- Conducted measurements on mobile telephony electromagnetic fields.
- Contributed to technical support of various projects, such as ENI CBCMED BERLIN.

SKILLS

- Programming Languages: C (+embedded C), Assembly (MIPS32), Python, HTML
- Software: Quartus, Cadence Virtuoso, MATLAB, SOLIDWORKS, LaTeX

PARTICIPATIONS & VOLUNTEERING

- IEEE Circuits and Systems Society member
- IEEE Aerospace and Electronic Systems Society member
- Member of electronics team at Formula student team of University of Cyprus (FRTUCY) 11/2022-01/2024
- Member of the order of American Hellenic Educational Progressive Association (AHEPA)

LANGUAGES

- **Greek** (native)
- **English** (C1)

PUBLICATIONS

L. Petrou, A. Michaelides, S. Dallidis, and J. Georgiou, "A Radiation-Aware Active-Matrix a-IGZO IC for Flexible Metasurface Biasing in Low-Earth Orbit," *34th IFIP/IEEE International Conference on Very Large-Scale Integration (VLSI-SOC 2026)*, **under review**.
